

Floxcor™

FUNGICIDE

+

Eagle® 20EW

SPECIALTY FUNGICIDE

A Winning Combination

Amplify the power of Floxcor™ fungicide by adding Eagle® 20EW specialty fungicide to your tank mix or as a rotation partner.

Floxcor™ fungicide at a glance

- **Active ingredient:** fluoxastrobin
- **Signal word:** Caution
- **Trusted chemistry:** FRAC 11 (strobilurin) group fungicide
- **Diseases controlled:** 25+
- **Rainfast:** 15 minutes

Eagle® 20EW specialty fungicide at a glance

- **Active ingredient:** myclobutanil
- **Signal word:** Caution
- **Trusted chemistry:** FRAC 3 (triazoles) group fungicide
- **Diseases controlled:** 15+

Better together

Prevent and control all major soil and foliar diseases with the winning combination of Floxcor fungicide and Eagle 20EW specialty fungicide. When used as a tank-mix or rotation partner, the combination enables you to manage important nursery and ornamental diseases without the plant growth regulator effects.

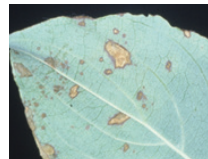

Versatile solutions, rapid plant uptake

Both fungicides are taken up quickly by the plant by working through xylem and translaminar movement, protecting both the root and leaf to control and prevent a broad range of diseases. The two active ingredients – fluoxastrobin and myclobutanil – interfere with respiration and cell wall synthesis in plant-pathogenic fungi and are potent inhibitors of spore germination and mycelial growth.

The combination can manage important nursery and ornamental diseases without the plant growth regulator effects often found in similar products – meaning it shouldn't inhibit the growth and development of ornamentals.

Diseases controlled

When used together as a tank-mix or rotation partner, Floxcor™ fungicide and Eagle® 20EW specialty fungicide prevent and cure damaging nursery and ornamental diseases, such as:

Anthracnose

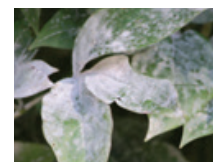

Botrytis

Cercospora Leaf Spot

Downy Mildew

Powdery Mildew

Phytophthora
